SUMMARY

Final-year Information Technology student at RMIT University Vietnam with a strong interest in cybersecurity, application security, vulnerability research, digital forensics, and threat analysis. Experienced in backend development, API testing, network security fundamentals, and forensic tools, with growing exposure to penetration testing. Currently seeking graduate or entry-level cybersecurity opportunities focused on security testing, vulnerability assessment, digital forensics, or security engineering.

EDUCATION & CERTIFICATIONS

Bachelor of Information Technology | RMIT University Vietnam | 2023 - 2027
- Current GPA: 3.2/4.0
- Double minors: Cyber Assurance, Enterprise Systems Development

Google Cybersecurity Professional Certificate | Google, via Coursera | Jun 2026 | Verification link

SKILLS

Security & Forensics	Nmap, Wireshark, Burp Suite, Autopsy, FTK Imager, Volatility, Sleuth Kit, binwalk, ExifTool, CyberChef, Kali Linux
Networking	VLANs, subnetting, routing fundamentals, IP configuration, Cisco Packet Tracer
Technical Areas	Network scanning, traffic analysis, web vulnerability testing, disk/memory forensics, metadata analysis, OSINT
Databases	MySQL, MongoDB, Elasticsearch, PostgreSQL, Supabase
Languages	Vietnamese, English (IELTS 7.5)
Soft Skills	Communication, research, adaptability, time management

WORK EXPERIENCE

Backend Developer Intern | Part-time | F5 Online Trading | Mar 2026 – July 2026
- Contributed to the development of backend features for a user-facing web platform and Flutter mobile application
- Developed RESTful API endpoints to support data retrieval and application functionality across web and mobile platforms
- Implemented data retrieval, filtering, and search functionality using MongoDB and Elasticsearch
- Tested and validated RESTful APIs using Postman, verifying responses and troubleshooting backend issues
- Ran and tested backend services in a containerized Docker environment to ensure consistent local development
- Applied secure coding practices by validating user input, implementing appropriate error handling, and managing sensitive configuration through environment variables

PROJECTS

GreenRoute HCMC | Node.js, Express.js, Leaflet, OSRM, AQI APIs, Android WebView, Render | Mar 2026 – May 2026
- Built a pollution-aware EV route planning web app for HCMC, combining OSRM routing with AQI-based route

scoring
- Developed Express.js endpoints for geocoding, AQI zones, route planning, and vehicle data compatibility.
- Implemented Leaflet-based map UI with browser-side EV profile storage using localStorage and IndexedDB datasets
- Deployed the web app on Render and packaged it for Android distribution through a WebView wrapper
- Led a four-member team using WBS planning, meeting logs, testing records, and decision documentation

Virtual Network Design | Cisco Packet Tracer, Microsoft Visio| Aug 2024 – Sep 2024
- Worked in a team of four to design a virtual network layout for a four-story building using Cisco Packet Tracer.
- Configured routers, switches, IP addressing, subnet masks, default gateways, and device interfaces for a network supporting 135 users.
- Designed the network with future scalability in mind, allowing for up to 30% projected growth.
- Implemented VLANs, inter-VLAN communication, Wi-Fi, and IoT device integration based on building requirements.

RELEVANT COURSEWORK

Ethical Hacking and Security Testing | High Distinction
- Applied cybersecurity theory to perform controlled cyber-attacks such as Session Hijacking, Data Injection, TCP Reset, Packet Sniffing & Spoofing, DoS
- Learned how to configure and utilize common defenses such as firewalls to defend against previously mentioned attacks
- Strengthened cybersecurity fundamentals

Computer and Internet Forensics | Distinction
- Acquired fundamentals of computer and internet forensics
- Learned about different kinds of computer forensics, including web forensics, mobile forensics, network forensics, and file system forensics
- Applied theory to practice and performed previously mentioned types of computer forensics

EXTRACURRICULAR ACTIVITIES

Club Member: RMIT SGS Cybersecurity Club
- Regularly participate in biweekly cybersecurity workshops covering digital forensics, OSINT, cryptography, and CTF problem-solving
- Training as a CTF competitor through hands-on challenges and team-based practice sessions
- Participated in various CTF competitions with other members of the club

International Exchange Program | RMIT SGS – RMIT Melbourne | Jul 2025 – Jan 2026
- Acquired three Distinctions and one High Distinction while studying as a full-time student
- Led a team comprised of four international students to propose and present a technological innovation
- Adapted to a cross-cultural academic environment while developing independence, communication, and collaboration skills.
